AMPCONTROL SCALES UP OPERATIONS IN WESTERN AUSTRALIA TO SUPPORT INDUSTRY DEMAND FOR MINE SITE ELECTRIFICATION

- Ampcontrol doubles size and workforce in Western Australia in response to growing industry demand in the resources sector.
- New facilities include expanded manufacturing facilities and extensive range of custom cable systems and services.
- Workforce grows by 45% year-on-year, + 50 new manufacturing and professional jobs.
- Announcement comes as Ampcontrol releases new company vision and strategic plan to lead the global energy revolution.

Ampcontrol has significantly expanded its presence and skilled workforce in Western Australia, relocating to larger facilities in Kewdale to meet industry demand for mine site electrification.

In addition to moving to a new 9,500m² manufacturing site, Ampcontrol has expanded its services to include a cable workshop, bringing more than 20 years of cable service and management experience to customers in Western Australia.

The expansion of Ampcontrol services in Western Australia follows the company announcement on Wednesday 27 September of a new company vision to **lead the global energy revolution** with strategic plans for growth and expansion into new markets, geographic locations, and innovative energy transition solutions for the resources sector.

Ampcontrol is focused on diversifying and growing the business with a key focus on renewable energy manufacturing and how it can support customers in decarbonisation and mine site electrification.

"We want to collaborate with our customers to help them solve their most complex problems in energy. With an industry-wide push towards decarbonisation, it is a natural progression in the growth of our business to extend our service offerings to support mine sites in Western Australia to meet both customer and industry needs," says **Rod Henderson, Ampcontrol Managing Director & CEO**.

Local access to cable products and services from Ampcontrol will support surface applications and underground applications with decarbonisation efforts, with a fully stocked store of spare parts and consumables for cables. With the industry-wide push in WA seeing machines becoming electrified, additional engineering designs and functions need to be utilised.

Customers in WA will have local access to Cable Track, an Ampcontrol product that provides a full lifecycle of cables from new to grave, which will assist mine sites with forward planning their assets and future-proofing their business.

From the sale and repair of power cables to the development of industry-leading transportation solutions and predictive and preventative maintenance programs, Ampcontrol can devise a custom cable systems management approach to suit any site, including mining, tunnelling, defence and industrial applications.

"Ampcontrol has been working with cables for more than 20 years; we bring an abundance of domain expertise on cable management systems which will be applied locally in Western Australia. We have the people, the equipment, the cable management expertise using the latest repair techniques and philosophies as we collaborate with customers to aid their decarbonisation efforts," says Mr Henderson.

MEDIA RELEASE

Ampcontrol offers comprehensive services for our customers' unique cable systems, with the experience to support both underground cable and high voltage cable varieties, while supporting new cable installation.

"At Ampcontrol, we have always felt strongly about keeping manufacturing jobs here in Australia. By expanding our operations in Western Australia, it further reinforces the capabilities of Ampcontrol," says Mr Henderson.

"This is just the beginning for jobs growth as we scale up our operations to deliver innovation solutions to meet the needs of our clients."

ENDS

MEDIA RELEASE

Ampcontrol is challenging the future by solving the most complex problems in energy. Ampcontrol creates energy solutions of scale using innovation partnerships, their smart people and advanced Australian manufacturing. Their vision is to lead the global energy revolution and make net zero a reality. Every day, the world-first innovations from Ampcontrol help and support customers in all industries to decarbonise. With a proven track record of award-winning innovations and 55 years of developing custom energy solutions, Ampcontrol is trusted by customers worldwide to future-proof their business.
