

# COAL STACKER RECLAIMER SLEW BEARING MONITORING

PRODUCT BROCHURE

## OVERVIEW

The coal stacker reclaimer monitoring system gives a snapshot of the current wear condition of your slew bearings to give an indication of excessive wear or damage.

## BENEFITS

- Long lead time to failure allowing adequate window planning and resourcing replacement
- Avoid protracted machine downtimes due to slew bearing failure
- We have a proven history for finding solutions to customer plant problems and malfunctions, either detecting plant issues early through condition-based maintenance or getting their equipment back into production as soon as possible
